Disk: Type *RUN 'EYE'* and press the *ENTER* key. The game will load and run automatically.

ATARI ST

Insert the disk, label side up into Drive A and double click on the Drive A icon. Now double click on the *EYE.TOS* icon and the game will load and run automatically.

Should you have any problems please consult your computer's user manual

WELOCOME TO THE FASCINATING WORLD OF EYE. The publishers, **Endurance Games Ltd**, would like to thank you for selecting their game as your choice and wish you many hours of enjoyment.

THE BOARD

The board consists of 32 coloured squares formed by two spirals within a circle. There are 8 different colours each having 4 squares in view at any one time. By rotating the spirals it is possible to change the visual position of the squares of each colour. The position of the squares of each colour is called a pattern and by rotating the spirals you will notice there are 4 patterns, the Long spiral, the Short spiral, the Straight line and the Circle.

Also shown on the board is the player's **Status box**. This is used initially to indicate the number of counters to be placed by a player during set-up and afterwards to indicate "**controlled colours**" that a player may capture during the course of a game.

THE GAME OBJECTIVE

The object of the game is to get the required number of your counters onto the corresponding colour squares on the game board.

TWO PLAYER GAME

The winner of a two player game is the person who manages to get **four** of his counters onto his colour pattern on the board. Each player starts with six counters and takes it in turns to place one piece at a time onto an unoccupied square on the board. The player who is playing **red** makes the first move. The number of moves a player may make is determined by the highest number of their counters on any one colour. For example if a player has 3 counters on grey, 2 counters on green and 1 counter on orange then they have 3 moves available to them.

TWO PLAYER GAME (CONT.)

A move is made either by moving a player's own counter to an adjacent square (see fig 1) or by moving one of the spiral wheels clockwise or anti-clockwise. A player on their turn may move their counters **and/or** turn the wheels in any combination or direction up to the total number of moves allowed. A player is **not** allowed to place a counter on an already occupied square, nor to "jump" over occupied squares. The wheels can be moved in a clockwise or anti-clockwise direction in steps. It takes 16 steps to complete a revolution of the wheel and each step counts as one move.

If a player, at any time during a move, has **four** of his counters on any colour other than their own, they are deemed to have "**control**" of that colour and this will be indicated by the placing of a "**control colour**" counter in the player's status box. If, **before** a player makes a move, there are any of their opponents counters lying on a player's "**controlled**" colour they may, if they wish move any or all of the offending counters to **any** unoccupied square on the board.

THREE PLAYER GAME

The three player version is played to the same rules as the two player game with the following exceptions and variations: Each player plays with **four** counters not six. A board colour is "captured" and controlled when a player has **three** of their counters on that colour. A board colour **cannot** be captured if there is another player's counter on that colour. If a players **own** colour is captured they are out of the game and the remaining players carry on. If two player's have their own colour captured then the surviving player is deemed to be the winner.

FOUR PLAYER GAME

The four player game is played to the same rules as the two player game with the following exceptions and variations. Each player plays with **three** counters instead of six. A board colour is "captured" and controlled when a player has **two** counters on that colour. A board colour **cannot** be captured if there is another player's counter on that colour. If a player's **own** colour is captured they are out of the game and the remaining player's carry on. If three players have their own colour captured then the surviving player is deemed to be the winner.

GAME VARIATIONS

The computer versions of the game **Eye** have various features and rule variations that are not included in the board game and selection of these is made by various screen prompts at the beginning of the game.

First you will be asked to enter a number relating to the number of moves made before a colour change on the board occurs. The colour pairs that are swapped over are **pink** with **grey** and **orange** with **mauve**. This input can be any number between 1 and 255, but by pressing **0** or **ENTER** a static board is selected.

During normal play a player would only be allowed to win the game or "capture" a colour during their turn. The next option allows you to do both at any time during the game. Simply press the on-screen prompt key to select or reject this option. Finally, there is an option that allows player's to "**steal**" a captured colour during the course of the game by placing the required number of counters on an already controlled colour. Again, simply select the on-screen prompt to accept or reject.
